Technical Information

The maintaining machine spindle run-out accuracy allows superior machining quality. Maximizes tool holder performance!

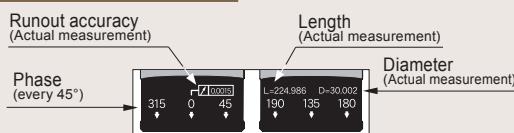

Periodically checking the run-out accuracy will result in superior machining.

- ▷ Light-weight (20% lighter), hollow design makes it easy to use.
- ▷ The actual measurement values are marked on the body.
- Length Diameter Runout accuracy Phase of run-out
- ▷ Ideal for setting Z axis datum.
- ▷ Reasonable price.

You can recognize the exact run-out accuracy and the highest run-out of the spindle.

You can check the spindle condition more precisely using the run-out value and position marked on the body.

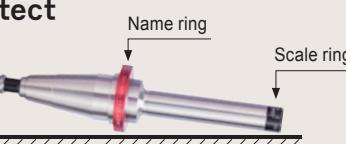

It can be installed into the spindle in every phase.

There is no drive-key groove, so measurements can be made without worrying about the phase.

Handy CMA type

Allows you to check the dynamic accuracy thanks to optional balance adjustment.

The name ring and scale ring protect it from scratches and dents.

The taper area and straight area do not touch the table surface even if they are placed horizontally.

Full-fledged CMB type

Z-axis deflection and spindle travel accuracy can be measured.

■ Option

- Coolant duct(HSK-A)
- Retention knob(BT)
- Exclusive retention knob(CAT. / DIN)
- Balance adjustment (only for CMA type) less than G2.5 /30000min⁻¹
- Please order by adding "BL" to the end of the code.
(Ex. : HSK63-CMA25-175 BL)

■ Std. Access.

- Accuracy inspection sheet

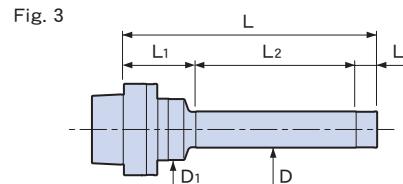

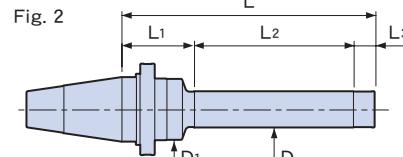

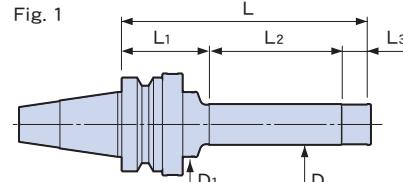

■ Note

- NT type is available for BT/CAT. and DIN spindle by changing the retention knob.
- HSK type is available for both HSK-A and HSK-E spindles.
- HSK-F type is available only for HSK-F spindle.
- A special design retention knob is required for CAT./DIN/ISO is not available. Contact us for the details.
- Use a market standard retention knob for the BT spindle.
- NT30 type can be installed into a spindle at 0° and 180°.

■ Caution

- A.T.C is not available. (except for NT30)

The sub-zero treatment prevents secular change.

Exclusive retention knob
